S.

S (es), the nineteenth letter of the English and other modern alphabets, and the eighteenth of the ancient Roman alphabet, derives its form (through the ϟ and Σ, Ʒ of early Latin and Greek inscriptions) from the Phœnician W (Hebrew ש *shīn*), which represented a voiceless sibilant: in some of the Semitic langs. (s), in others (ʃ). (Each of these phonetic symbols is intended to represent a class of sounds the articulatory positions of which vary considerably; the difference between the two classes is acoustically very recognizable, but the nature of the essential difference in formation is still obscure.) In ancient Greek and Latin the value of the letter is believed to have been always (s). In late L. *s* between vowels was in most instances pronounced (z), a sound which was not separately represented in the Latin alphabet. Hence when the Roman letters were adopted in OE., the letter S was used to represent both the unaltered Germanic (s), and the (z) which had been developed from that sound in certain positions.

In OE. *s* was pronounced (s) initially and finally, and medially when it was either contiguous with a voiceless consonant or began the second element of a compound; medially between voiced sounds it was pronounced (z). The southern dialect had in ME., and possibly in late OE., the peculiarity of voicing the initial *s* (in native words) as well as the initial *f* and *þ*. This phonetic habit extended to Kent as late as 1340, as is shown by spellings like *zenne* (OE. *synn*, sin) in the *Ayenbite of Inwyt*; it is now confined to the south-western dialects.

In mod. English the general rule is that *s* is pronounced (s) at the beginning of a word or of the second element of a compound, and when doubled or in contact with a voiceless consonant. Between vowels, and when phonetically final, a single *s* is mostly (z). But there are many anomalies and uncertainties, especially in classical derivatives: cf., e.g., *absurd* (ǣbsɜ̄·ɹd), *observe* (ǒbz-); with regard to some words usage is divided, as in *absolve* (ǣbs-, ǣbz-), and the words in *-ive*, e.g. *effusive*, *evasive*. Even *ss* is in some words sounded (z), as in *dissolve* (against *dissent*, *dissect*, etc.), *dessert*, *possess*.

The phonetic combinations (sy), (zy), when rapidly pronounced, are very similar in acoustic effect to the simple consonants (ʃ), (ʒ), the position of the tongue for these being intermediate between the positions for (s) or (z) and (y). Hence in some words where earlier Eng. had (sy) or (zy), written either as *s* (before diphthongal *u*) or as *si*, the modern language has (ʃ) or (ʒ), so that the letter has acquired these two new values. Examples are *sure*, *sugar*, *censure*, *mission* (mi·ʃən), *Asia* (ē¹·ʃă), *treasure* (-ʒŭɹ, -ʒəɹ), *evasion* (-ʒən). In some varieties of vulgar speech this tendency is carried much further, as in the pronunciations (ʃū), (prĭʒū·m) for *sue*, *presume*.

S is silent in a few words adopted from Old French, as in *aisle*, *isle* (hence also pseudo-etymologically in *island*); in the Law French *mesne*, *demesne*, a silent *s* was inserted by false analogy.

-s, *suffix*, forming adverbs, was originally *-es*, identical with the suffix of the genitive singular of many neuter and masculine sbs. and adjs. Several of the adverbs in *-es* that existed in OE. are genitives either of sbs. (neut. or masc.) as *dæges* by day, *nédes* Needs, *þances* voluntarily, or of neuter adjs., as *sóðes* truly; on the analogy of these, *-es* was added, with adv.-forming function, to feminine nouns, as in *nihtes* by night, *endebyrdes* in order. OE. had also advs. compounded of *tó* prep. and a genitive governed by it, as *tó-gegnes* (see To-gains), *tó-middes* (see To-mids); side by side with these there existed parallel and synonymous advs. like *on-gegn* Again, *on-middan* Amid, in which the dat. or accus. was governed by a prep. Hence there arose in early ME. mixed forms such as *aȝeines*, *amiddes*; and the frequent coexistence of the two forms of the same adv., one with and the other without *s*, led to the addition of *s* to many advs. as a sign of their function. In some instances the extended form prevailed, as in *eftsoons*; in others it survived only in dialects, as in *oftens*, *gaylies* (Sc.). See also the articles -ling^2, -li(n)gs, -ward, -wards, -way, -ways.

In *once*, *twice*, *thrice*, *hence*, *since*, etc., the suffix is written differently. In Against, Alongst, Amongst, Amidst, and the dialectal *onst* (see Once), the original *-es*, *-s* has become *-st*.
